

"From big to small containers, simple!"

THE LANCE VALVE

The **Gravifill Lance Valve** is an innovative stainless steel filling valve designed for handling foaming and highly fluid products while **minimizing foam formation**. Its distinctive feature is an **underlevel filling** system, where the lance lowers into the container and begins filling from the bottom. This controlled filling method significantly reduces turbulence and prevents foam generation during the filling process.

"EFFORTLESS MANOEUVRE, CRAZY RESULTS"

"FOAM-PROOF DESIGN"

Smooth internal surfaces and optimized geometry minimize product buildup and help reduce foam formation, resulting in increased operational uptime and fewer maintenance interruptions.

"HYGIENIC CONSTRUCTION"

Built entirely from stainless steel and food-grade materials, suitable for demanding environments including food, cosmetics, adhesives, and specialty chemicals.

"TOOLLESS DISASSEMBLY"

The standard Tri-Clamp connection enables quick and easy disassembly, significantly simplifying cleaning and maintenance procedures. This makes it particularly suitable for applications that require frequent product changeovers.
