

"From big to small containers, simple!"

THE VISCO VALVE

The **Gravifill Visco Valve** is a high-performance dosing valve engineered to tackle the challenges of filling thick and sticky fluids with maximum control and reliability. Its design is inspired by the industry standard manual valve. —ensuring **clean, consistent flow** even with **high-viscosity materials** such as adhesives, pastes, gels, or syrups.

"UNIQUE ENGINEERING, UNPARALLELLED ACCURACY"

"HIGH-VISCOSITY OPTIMIZED DESIGN"

Optimized for viscous product behavior, the internal flow path reduces turbulence and back-pressure buildup while allowing gravity-assisted flow for thick materials.

"PNEUMATIC ACTUATION"

The valve can be actuated via a pneumatic cylinder in either single-step or dual-step configurations. The dual-step variant enables controlled opening for coarse and fine dosing phases, enhancing dosing precision.

"TOOLLESS DISASSEMBLY"

The valve can be taken apart manually, without the need for tools, drastically simplifying cleaning and maintenance routines. Perfect for applications with frequent product changeovers.
